Job Title: Intern	Location: Pune/Bengaluru

About DDN:

This is an incredible opportunity to be part of a company that has been at the forefront of AI and high-performance data storage innovation for over two decades. DataDirect Networks (DDN) is a global market leader renowned for powering many of the world's most demanding AI data centers, in industries ranging from life sciences and healthcare to financial services, autonomous cars, Government, academia, research and manufacturing.

"DDN's A3I solutions are transforming the landscape of AI infrastructure." – IDC

"The real differentiator is DDN. I never hesitate to recommend DDN. DDN is the de facto name for AI Storage in high performance environments" - Marc Hamilton, VP, Solutions Architecture & Engineering | NVIDIA

DDN is the global leader in AI and multi-cloud data management at scale. Our cutting-edge data intelligence platform is designed to accelerate AI workloads, enabling organizations to extract maximum value from their data. With a proven track record of performance, reliability, and scalability, DDN empowers businesses to tackle the most challenging AI and data-intensive workloads with confidence.

Our success is driven by our unwavering commitment to innovation, customer-centricity, and a team of passionate professionals who bring their expertise and dedication to every project. This is a chance to make a significant impact at a company that is shaping the future of AI and data management.

Our commitment to innovation, customer success, and market leadership makes this an exciting and rewarding role for a driven professional looking to make a lasting impact in the world of AI and data storage.

Job Description:

We are currently seeking interns for an annual internship at Pune and/or Bengaluru location.

Mission:

The intern will work on one of the development/automation/QA teams of DDN products. Tasks includes assisting existing teams with debugging/development/testing of existing as well as upcoming features for various products. They will be provided with an excellent opportunity to work on one of the best & highest performing Storage Stack in the HPC/AI segments.

The intern will gain valuable experience in cutting-edge technologies such as Docker, Kubernetes, and machine learning, making this internship a perfect opportunity for professional development and growth.

Internship goals are the following:

- Learn about tools used in day to day activities of the product. Like version control software, code review tools, Jenkins etc.
- Learn about the product. Get comfortable with its functionalities, its use cases.

- Learn about the internal working, frameworks used, and processes followed in the product.
- Get in-depth understanding of languages, technologies used in the product.
- Participate in day to day activities of product development cycle and assist existing teams to finish tasks in efficient and quick fashion. Like reproducing and debugging failures, finding out solutions, testing solutions etc.

Duties and Responsibilities:

- Finishing assigned tasks within specified timelines.
- Time to time status update to your reporting manager.

Qualifications:

- Bachelor's or a Master's degree in computer science, Business Information System; other majors in related fields of studies will be considered, as will work experience in related fields.

Skills and Experience:

- Strong Analytical and Logic Skills; Strong Presentation and Communication Skills
- Comfortable with one or two of the popular programming languages like Python, C, C++, Java, Golang, Rust etc.
- Advanced knowledge of and direct experience with UNIX and/or Linux operating systems.
- Ability to develop support tools - shell scripting, python
- Understanding of programming fundamentals and ability to read, analyze, and debug code effectively.
- Identify logical errors, troubleshoot issues.
- Ability to use open-source debugging tools like gdb or writing custom debugging tools.
- Knowledge of MS Office applications such as Excel and Word.
- Conscientious and detail oriented.

AI and Modern Development Skills

- Familiarity with AI-assisted development tools for coding, debugging, and learning, with a basic understanding of prompt engineering concepts.
- Willingness to use AI tools thoughtfully to accelerate learning and software development.

Basic knowledge of storage systems is a plus.

DDN Core Competencies:

DDN has a very strong orientation towards these four characteristics and any successful employee will demonstrate these capabilities:

- **Self-Starter -** Takes independent action to identify and solve problems. Seeks out relevant information needed to make decisions. Gets involved with new initiatives.
- **Success/Achievement Orientation -** Delivers quality results consistently. Targets, achieves (or exceeds) measurable results. Sets challenging goals, focuses on critical priorities, and is accountable.

- **Problem Solving -** Recognizes problems and responds with a systematic assessment that identifies and addresses cause of issue. Practical, realistic, and resourceful.
- **Innovative -** Builds and improves key business processes that enhance the effectiveness of DDN. Generates new ideas, challenges the status quo, and solves problems creatively.
